Choosing the Right Respirator
Choosing the right respirator to protect workers from airborne contaminants is essential. Respirators may not protect you from all contaminants as different contaminants require different protection. There are limitations for each type of respirator and you must be familiar with them prior to using them.

General precautionary information can be found in the manufacturer’s operating manual. However, it may be necessary to seek the assistance of an experienced safety professional or occupational hygienist who is familiar with the actual workplace environment and contaminants.

Types Of Respirators
■ Disposable particulate respirators provide minimum protection and are typically used to protect against nuisance dusts and fumes.
■ Full mask and half mask air purifying respirators use cartridges and particulate filters. Air purifying respirators only work if you use the right cartridge and/or filter for the specific contaminant. Mechanical filters will block solid particles, while chemical filters soak up substances.
■ Supplied air respirators can come in a variety of forms such as self contained breathing apparatuses, air hoods, full body suits, and airlines or work packs.

The Key To Respiratory Safety
First you must recognize that the airborne hazards exist through pre-job planning. It is vital to recognize all the chemicals, materials and hazards you may be exposed to, as well as conducting frequent hazard assessments and workplace inspections to help identify and control those hazards.

A plan must be implemented to protect the health of all workers by assessing the environment, implementing engineering controls, having safety data sheets available, choosing the right respiratory protection and other personal protective equipment for the specific hazards.

Protect your health and familiarize yourself with the Occupational Health & Safety Regulations: **Section 88 Respiratory protective devices**; **Section 89 Inspection of respiratory protective devices**.
When accidents and incidents happen on the jobsite, we are always quick to point the finger at lack of training, not following practices or procedures, or even improper supervision. The idea that the hazards and dangers associated with the job were not properly communicated to all of the workers is often missed.

Tool Box Talks can go by many names, and although formats may vary, these meetings all serve one purpose: to inform employees and contract workers. Tool Box Talks are short, informal, meetings between management and the workers on a jobsite. The goal of these meetings is to reinforce current safe job procedures, inform workers of new and/or relevant procedures, review recent safety violations/incidents, and ensure workers are up-to-date on the information required to complete their work safely.

Always use a Tool Box Talk form to record the meeting topic, date, who was in attendance, and any follow-up actions to be taken. Not only do these forms help with consistency of record keeping, but they also ensure that nothing is missed. At the end of the meeting have management sign off on the form.

One of the most important aspects of a Tool Box Talk is giving workers an opportunity to voice their concerns and ask questions. All employees have a right to participate in health and safety as it relates to their work and it is the supervisor or manager’s responsibility to create an environment for them to do so. Once the meeting is over, and the form is filled out, it should be filed with other documented Tool Box Talks. Remember that Tool Box Talks are short and informal, they are not meant to be intimidating. Use the opportunity to have fun and stay on top of what is necessary to keep safety culture a strong part of the business.

The Saskatchewan Construction Safety Association (SCSA) is an industry-funded, membership-based, non-profit organization that provides cost-effective, accessible safety training and advice to employers and employees in the construction industry throughout the province to reduce the human and financial losses associated with injuries. Registered March 20, 1995, the SCSA is, and has been since inception, committed to injury prevention. Serving almost 10,000 member companies with business offices in both Regina and Saskatoon, the major business units of the association are Advisory Services, Business Development, Corporate Services, Program Services and Training. The mission of the SCSA is constructing safety leadership in Saskatchewan and the vision is to create the safest construction environment in Canada.
